

CAR WARS (EPISODE 20)

Welcome back to Jedi Training.

In this podcast we're going to be talking about Car Wars,
a play on the Steve Jackson game, Car Wars.

Maybe some of you are familiar with Steve Jackson
who brought us the Illuminati card deck.

But we're going to be talking about it because it's an important part of
what you're going to be up against.

We've talked about the necessity to protect yourself
and we're emphasizing on protection because as soon as you engage this enemy
you're going to be attacked relentlessly everywhere you go.

Some places are going to be worse than others.

Your home is your primary target.

They look for places of weakness and there's not a weaker moment
than when you're tired, when you're sleeping,
when you're relaxing on the couch, when you're in front of the computer.

That's when they're going to target you.

So we've been talking about shielding.

In Ephesians 6.13 the emphasis is on protecting yourself.

And we've talked about shielding extensively.

We can't talk about it enough.

I know it starts to sound old.

But until you have the shielding that you need to survive,
don't even think about engaging this enemy.

Otherwise, you may run out of time.

The learning curve is extreme without shielding.

And at this stage of the game, at this stage of the conflict,
you know, many people aren't going to survive.

And to be quite honest, you don't need to be engaging this enemy
more than just talking about stuff on the internet for them to come after you.

Many people have been killed.

They don't understand why they've been killed until it's too late.

And so, you know, we want you to up your game.

We want you to be able to protect yourself.

And so, you know, we're going to, you know, keep talking about shielding
as well as what happens outside of the primary target zone, which is your home.

So, once again, you really want to, you know, shield around your bedroom.

You want to shield around your home.

They're going to target you while you shower.

They're going to target you while you're cooking.

They're going to target you while you're on the couch,
while you're laying in bed, everywhere and anywhere.

They're going to be relentless, to say the least.

So, we've talked about shielding strategies.

You know, the Bible says that you need to protect your head.

You need to protect your chest.

You need to protect your midsection.

You need to protect your feet.

You need to have a shield, which is basically shielding.

And so, there's a huge emphasis on protecting yourself
before you can get into the attack phase.

And unpacking all of that, you know, for most people just, it doesn't even register.

Because they're looking at it as a parable, and they don't really understand.

So, you know, in the previous podcast, and in many other podcasts, we've talked about shielding strategies.

We're not going to go over all of that again.

What we want to talk about is what happens outside of the primary target zone, which is your residence.

You're going to be attacked wherever you go.

You're going to be attacked at the store.

You're going to be attacked at work.

You're going to be attacked on the road.

And you're going to be attacked by vehicles around you.

Vehicles have been weaponized.

The LED lights, the electronics that are in them.

And even the demon-possessed skills inside the cars will be using telekinetics as well.

And so, car wars is a real aspect to this engagement with the enemy.

You're going to be engaging the enemy on the road.

You're going to be engaging the enemy at the store, at work.

And they're going to be, you know, attacking you.

And that's all the more reason that you need to, you know, armor up.

Make some kind of clandestine, secret, you know, undercover armor that you can wear when you go out.

You know, I've told this story before.

I'll tell it again.

And when, you know, this first started happening to me back in 2020, October, November, December of 2020, you know, I was trying everything to survive.

You know, all sorts of shielding strategies, you know, multiple layers, grounding, everything.

Everything I could.

And it wasn't until, you know, I realized that I need to put on armor to survive that I was able to stand.

And, you know, I was forced to basically get a place that was just, you know, totally off, numerologically speaking.

It was like building number six, you know, street number 13.

And it was just, you know, I was kind of desperate.

And when you're desperate, you make bad decisions.

And so I basically, you know, took that place.

It was an ambush.

It was a honey trap.

And, you know, they basically, you know, they tried to kill me back then.

But once I got the armor together and I could stand and I started going on late night missions and we'll do, you know, a podcast in the future on late night missions.

You know, I basically, you know, tried to figure out, you know, what was going on.

And, you know, I started doing some, you know, pretty, you know, spectacular things.

Can't really go into the details because, you know, the first rule of Fight Club is that you just don't talk about Fight Club in that way.

But I went on some late night missions and it was spectacular.

And one day after a mission, you know, I was just going to the store, getting my supplies.

I didn't bring my armor with me.

Big mistake.

They tried to take me out there and essentially, you know, I had to run out of the store to survive.

I left the groceries, ran out the store.

And when I got outside, I saw like this black orb.

It wasn't like a UFO.

It was like, like dark energy, you know, something out of CERN or something.

Just no idea what this thing was.

It was just hovering above the parking lot of the store.

Got in my car, you know, and just, you know, 100 miles an hour back to the Batcave to get my armor.

And on the way, I mean, there were shills jumping out of the bushes, basically, you know, trying to block the road, trying to stop me from, you know, getting back home and stuff like that.

Thankfully, I had the Sword of the Spirit with me and I could launch attacks at this thing.

We'll get into that.

You know, it sounds spectacular and all that.

What does that mean?

What does that entail?

But I feel like, you know, that bought me enough time to get home.

And like I said, we'll cover the Sword of the Spirit later.

We're just not there yet.

But any case, you know, ever since then, I've always worn some kind of armor when I go out.

And the very minimum that you need is the girdle of truth.

Now, girdle in the old, you know, school language basically means, you know, a total covering of the midsection basically from above the knees to basically the chest area.

And so when you really unpack what the armor means is basically you're protecting yourself head to toe.

It's head to toe protection.

But the very minimum that you need is the girdle of truth, a belt of truth.

So, I mean, that's a real simplified, you know, basic kind of like understanding of what they're trying to tell you.

And it acts like a Faraday belt.

You know, when people are working with like these Tesla towers, they wear like this chainmail suit.

And the electricity goes, you know, basically on the outside of the suit and to the ground.

It goes the shortest path to the ground.

And so, you know, basically a Faraday belt or a girdle of truth simplified into a belt of truth will make, you know, some of the energy go around you instead of through you.

And so bare minimum, you're going to want to make a belt, you know, out of about five or ten layers of aluminum foil alternating sides so that you're basically making sandwiches with the shiny side on the inside.

So that way when an energy attack comes in, it bounces around and bounces back and basically cancels that frequency.

It's almost like auto jamming armor, if you will.

It's not 100% effective, but it can save your life.

And so that's the, you know, the very basic necessity, the very bare minimum of what you need in the future going out in public.

You know, and you can conceal a belt real easily.

But, you know, after that, you'll probably want to consider some kind of, like, breastplate.

And basically what I've done is, you know, in the simplest form is you make a little kind of, like, square, you know, shield for the heart.

And you can balance that with a backplate, with some shoulder straps, and you've got yourself basically, you know, a real, you know, skimpy flak jacket.

And, you know, I've been doing that for nearly two years now.

Got to wear something like that under your clothes.

And you can, you know, cover it with fabric so that it looks, you know, it doesn't look shiny.

It doesn't draw attention to yourself.

You can conceal it many different ways.

But, you know, the short of the long of it is that you're going to need some kind of protection when you go shopping, when you go to work.

Otherwise, they're going to kill you.

They're going to give you a heart attack or a stroke.

And also you're going to want to, you know, wear some kind of shielding under your hat.

So we've talked about that.

We're going to go beyond that.

You know, you're going to be attacked in your car.

You're going to have basically leeches or tailgaters, you know, show up behind you relentlessly with the LED lights harassing you and attacking you.

And these things will actually, you know, these attacks can do a lot of damage too.

They can weaken you.

You'll feel a burning sensation.

It's definitely some kind of radiation attack.

And, you know, it's basically, you know, super well organized.

It's like some kind of Uber app or something.

Um, but much worse.

That basically allows these people to, you know, know your location and follow you and engage you, uh, nonstop on the road.

So the harassment is basically nonstop.

It's, you know, at home, at work, at the store, on the road.

And so you basically have to prepare for all of these contingencies.

You have to prepare yourself, uh, for the reality of the battlefield.

And, you know, we're telling you all of this because we've been able to, you know, put it all together.

And, you know, we wouldn't be talking about it unless it was the truth.

And so you need to know about this, uh, because it will happen to you.

You know, some people have already experienced the attacks on the road.

They don't know what it was.

They feel like they got zapped by something.

But cars have been weaponized.

And, you know, people driving the cars are using telekinetics as well.

And so it's the thing that, you know, you have to prepare for.

And, you know, if you've got some real good armor on, you know, maybe that'll help you, you know, to a certain extent.

But we strongly recommend that you basically add some shielding behind your seat, in your car, as well as in the trunk.

You know, basically, you know, that separation between the back seats and the trunk.

You know, you can reinforce that with some kind of sheet metal or Faraday material.

But we strongly recommend reinforcing the shielding in your car.

The aluminum, you know, slash plastic that most cars are made of isn't going to be enough.

You know, you might have an old, you know, an old car.

And, you know, the old tech is a lot better than the new tech.

That's for sure.

So you might have an old car with actual, you know, genuine steel.

And so, you know, that'll be helpful if you do.

But most people have basically, you know, real light, fuel-efficient cars with GPS and Bluetooth and Wi-Fi basically all in it.

And so those things, you know, will basically zap you as well.

I wouldn't want to be driving a modern, super modern car these days.

But in any case, you're basically going to get attacked either by your own car, by cars that are behind you, cars that are, you know, parked across the street.

You know, just about every shady vehicle that's parked nearby can be a platform for a weapon.

And it's not only the weapons that are built in, but they can basically, you know, drop a weapon into an empty space through quantum technology.

We kind of talked about that a little bit in the quantum physics podcast.

But that's a very real thing.

The technology that we're actually up against is way beyond the year 2020 or 2022, to say the least.

And, you know, we've basically encountered, you know, tech that is just mind-blowing.

Everything from tractor beams to teleportation to energy weapons that where you can actually see the ripples, you know, through the air.

And, you know, it sounds fantastic, but we're just not making it up.

It is what it is.

And we've reported on it, but it's something that we really need to reemphasize in this Jedi training because it's going to be part of your defensive strategy.

Without taking this into account, you're really going to be a sitting target on the road.

So you really have to reinforce your positions wherever you go.

So armor is your primary defense because it has, you know, basically the least amount of surface area when it comes to shielding for you to survive.

I mean, the amount of armor that it takes to protect your body when it's on, when it's in armor is a lot less than what's required to shield an entire room or even a bed.

And so, you know, eventually you're going to figure this out.

But to shield a bed properly, I mean, you're looking at, you know, quite a few square yards of shielding.

You know, the footboards, the headboards, the sides, underneath.

We don't necessarily recommend, you know, shielding on top.

You know, because we don't want you to box yourself in into a coffin where you can't breathe.

But if you were to shield the ceiling or you were to make some kind of blanket, I mean, there's another couple extra square yards as well.

I mean, you're talking about a lot more material than armor.

So armor is your primary defense and then you can kind of like expand or scale up in shielding and, you know, start protecting yourself.

And, you know, you can go a lot, you know, more skimpy.

You can go skimpier on like shielding in the kitchen or in the bathroom when you're taking a shower because they'll attack you there as well.

Now, you know, you can go skimpy, a little skimpier there, but places where you really linger and loiter, like the bed and the couch and stuff like that, I mean, you're going to have to be more heavy duty.

But do not neglect the road wars or the car wars because you're going to get hit with towers.

You're going to get hit by, you know, people driving behind you, people driving by you.

You're going to get hit by cars that are parked.

You're going to get hit by utility vehicles, by trucks, semis, construction vehicles.

You're going to get hit by a lot of things that you never thought, you know, you'd get hit by.

And basically, this is a cold war.

The enemy is using a lot of tech that's basically, you know, deployed in a covert way so that you can't see it, so that you wouldn't suspect it, that you don't even know where it came from.

And again, the technology is much more advanced than the year 2020.

And so, you know, people aren't anticipating the level of attacks that they're going to be facing.

And people are getting, you know, taken out for a lot less than, you know, telekinetics.

People are getting taken out just for, you know, talking about stuff on the Internet.

And it always comes in the form of a heart attack, stroke, or cancer.

So, you know, in the news recently, you know, they've been talking about Putin having throat cancer.

There's Kushner that's got throat cancer.

They gave Sarah Huckabee, you know, throat cancer.

That just came out.

There's no telling how many others have been given throat cancer.

I mean, that's an easy target.

You know, if you go in for, like, an x-ray or if there's, like, a nuclear bomb, they're like, you know, protect your throat, your thyroid, etc., etc.

That's another thing that you have to shield.

You're going to have to make, like, a neck guard or a thyroid guard.

But they've come after me that way, too, just about every body part.

I mean, you know, they can pick and choose.

They can target with accuracy that's just, you know, surgical in nature.

And, you know, if it goes undefended, it'll develop either into, you know, cancer, heart attack, or stroke.

But a lot of people have been taken out that way for a lot less than telekinetics.

And they have no idea what they're up against.

But they're up against the exact same thing that I'm facing right now.

And, you know, it's not a coincidence.

I mean, this is a pattern.

And I know exactly what's happening to these people.

But, you know, most people aren't going to even try to protect themselves.

You know, when you think about all the stuff that I'm talking about here, all the shielding and all the armor and stuff like that, people are like, no way.

I mean, I can't do that.

And so they're just going to get taken out.

But if you're going to survive, if you're going to stand, if you're going to endure until the very end, then you need to basically do what the Bible says.

And that's, you know, all of it from A to Z up to and including, you know, wearing armor and shielding.

But like we said, you know, this goes all the way into car wars.

They're going to hit you at the store.

They're going to hit you at work.

They're going to hit you wherever you can, wherever they can.

And whatever you can think about as a possibility, that's going to be a target for the most part.

And so you basically need to fill in the gaps.

You need to protect yourself wherever you can and understand that this enemy is always going to be looking for the weakest moment.

You're tired.

You're sleepy.

You know, you're lazy or whatever.

That's when they're going to strike.

You're desperate.

That's when they're going to strike.

So be on the lookout for ambushes, honey traps.

If it looks too good to be true, it probably is, etc., etc.

And just expect that you're going to be attacked just about everywhere you go.

The level of attacks kind of vary on, you know, your priority level as well as, you know, your shielding and where you're at.

I mean, the worst of it is going to be at night.

The worst of it is going to be while you're sleeping, while you're tired, while you can't move, you're a sitting duck.

That's when they can really, you know, basically, you know, juice up the energy weapon attacks, start hitting you from multiple directions, kind of like crossing the beams and doing, you know, all sorts of radical things.

And so, you know, the worst of it is going to be at home.

That's why we spend a lot of time talking about shielding, you know, especially the bed.

You know, when the news comes out, oh, they died in their sleep.

Oh, it sounds so peaceful.

It sounds so nice.

You know, nobody's going to think twice about it.

Perfect.

These people are, you know, so sinister.

That's how they do it.

So you got to think about that.

You got to take that seriously.

But also think about the car and the road and stuff like that because they'll come after you there as well.

And so if you've got tailgaters, you know, with the LED lights, you're starting to feel strange, a burning sensation, tired, fatigueness, anything.

You know, pull over, let them go by.

Until you get shielding done, basically, you, you know, you basically have to, you know, dodge the bullets on the road.

So once you get, once you get your car reinforced, you're wearing some armor, it's a lot more manageable.

It's like they're not even there.

But another thing to mention is that, you know, a lot of the telekinetic attacks, especially of the dark side, peak in the winter months in the peak of darkness.

It just kind of follows that pattern.

You know, the attacks are worse at night.

They're worse in the winter.

And so, you know, expect the unexpected, especially in the wintertime.

You know, we're not sure, you know, what's kind of like juicing them more in the winter.

If it's just the darkness or if there's some kind of Planet X that we get closer to, you know, during the winter months.

But whatever it is, you know, they juice up in the dark winter period.

So prepare for that.

We're going to leave it there for this podcast.

Appreciate everybody tuning in.

Until the next time, if you're listening to this, you are the resistance.
